
*****Group_Web_Chat*****

Hello,

This is basically a group chat system. In this system we will chat in groups with our friends and family members. The friend request will be sent to the member first and after it is accepted we can chat with each other.

Which technology is used ?

PHP
MySQL
HTML5
CSS3
JavaScript
Ajax

Which Software is needed ?

XAMPP / WAMPP Server
Text Editor [Eg. Notepad]

How to install the software ?

XAMPP Server <https://www.apachefriends.org/download.html>

All the installation completed :)

How to Import the Folder ?

C:/ > XAMPP/WAMPP Folder > htdocs/www > Paste Project Source Folder

How to Import the Database File ?

Open Browser > Search localhost/phpmyadmin > Click Create New Database > Database Name=chat_app

Open Browser > Search localhost/phpmyadmin > Click Import Button

> Click ChooseFile Button > Go to Project Folder > Database >
chat_app.sql > Click Open Button

All the Import Process Completed :)

How to run the Project ?

Start Xampp/Wampp Server

Open Browser > Search localhost/Group_Web_Chat_SourceFile/

Note:- Fontawesome CDN, Google Font use in this project so that
internet is required.

Hurry your project is ready to launch :)

Where is the SnapShot of the project ?

Path :-
SnapShot/
